

**FOR IMMEDIATE RELEASE**

## **Unitask Object Migration Manager Enhanced to Increase Control and Auditability of Oracle Applications Object Migrations**

*New Version Integrates with Version Control Systems*

**SAN FRANCISCO, Ca. (September 19, 2005)** – Unitask Inc., providers of software that makes Oracle Applications easy, announced at Oracle OpenWorld a new version of Object Migration Manager (formerly Unitask e-PACK) that integrates with version control systems. Object Migration Manager enables organizations to migrate AOL objects, setups, extensions and developments between Oracle Applications instances with zero errors, dramatically reducing the time required for this otherwise manual process.

“The ability to save administrative time and eliminate errors during the object migration process is the reason we built Object Migration Manager. With the addition of version control system integration, we have extended that time savings to the development organization while enhancing the auditability of changes across all Oracle E-Business Suite instances,” said Michael Segev, president and CEO of Unitask. “This new feature was developed in direct response to customers looking to streamline operations, eliminate errors and have more control of what goes into their production instance.”

Earlier versions of Object Migration Manager enabled administrators to create packages of AOL objects, setups, extensions and developments acquired from a source Oracle Applications instance. Object Migration Manager then transferred and applied those packages of objects to the target instance.

With the addition of version control system integration, Object Migration Manager expands the locations from which it can acquire objects beyond just a source instance. The new version can check out objects from an organization’s version control system. In addition, once Object Migration Manager creates its package of objects for uploading to the target instance, Object Migration Manager can check in the package to the same version control system. This functionality enhances the auditability and control of changes to the Oracle environment and gives Object Migration Manager a clear advantage over competing products.

-- more --

Object Migration Manager's ability to automate object migration provides organizations with many benefits such as:

- Speeding the migration process which saves developer and administrator resources
- Eliminating migration-related errors which reduces the time required to migrate objects and troubleshoot issues
- Streamlining migration control which decreases the number of resources required for the process
- Enhancing auditability which increases control over what goes into an organization's production instance
